

## day program services

# about us

The services of our day habilitation programs are designed to maximize a person's independence in activities of daily living, personal health and safety, socialization, decision making, communication, recreation, community inclusion, and leisure skill building.

Our services are person-centered and driven by each individual's needs and desired supports.

This service also provides evaluation and active therapeutic intervention to intellectually disabled and physically challenged adults. This is a medically based long term care service beginning at age 22. Nurses, Occupational, Physical and Speech therapists are on-site to work directly with individuals to provide assessment and therapeutic intervention designed to maximize skills in the areas listed above.

All programming is individualized, based on the needs and interests of the individuals served. Our professional service teams work cooperatively with families and providers to create an integrated approach to providing quality day habilitation programming.
